Wat geteld wordt, telt. Wat niet geteld wordt, telt ook.

What is counted, counts. What is not counted, also counts.

1. Foreword by the Director

Wat geteld wordt, telt. Wat niet geteld wordt, telt ook.

What is counted, counts. What is not counted, also counts.

In the spring of 2026, in a café in Deventer, a senior farm advisor at a regional cooperative told a visiting researcher the following sentence.

“Mijn boeren zijn niet bang voor apps. Ze zijn bang voor de formulieren waar de apps aan vastzitten.”

“My farmers are not afraid of apps. They are afraid of the forms the app is connected to.”

— Senior farm advisor, regional cooperative, Eastern Netherlands, 16 April 2026.

That sentence is the founding text of this Service. The Rijksdienst voor Gedeeld Beheer (RGB) was constituted in 2029 by the Wet op het Gedeeld Beheer in de Landbouw to recognise, count, and pay for the labour and knowledge that the previous compliance regime had ceased to see.

This is our second annual report. It covers fiscal year 2030–2031 in the Eastern Netherlands Region. It records the work of 71 member-cooperatives, 412,338 hours of articulation work, 11,348 processed Refusals, and 8,201 Stewardship Statements logged on the terms of those who made them.

It also records, in the section Risks to the Programme (p. 34), three structural threats to the Authority’s mandate. The first is the most serious. It is the risk that the Beheerder-skeurmerk itself becomes the next form to be optimised against. Reconstitution is not exit. It is a different room with different forms. The Authority does not claim otherwise.

The reader will find six routine archive entries from this fiscal year in the case files that follow (pp. 18–31). They are deliberately ordinary. They are an early morning in the working life of one advisor in one cooperative in Salland. A login request. An audit form that could not accept the form of knowledge the farmer actually had. A four-hour gap in a welfare-monitoring stream that this Authority declined to fabricate. A WhatsApp message about leaf spots. A scorecard the cooperative declined to be scored by. And a question from a junior advisor at lunch. How do we count what we actually do? This Authority has provided, this fiscal year, a partial answer.

The Authority is not a vision. It is a body of public servants doing arithmetic. The arithmetic is new. The labour it counts is old.

Den Haag, 2 mei 2031

Directeur · Director
Rijksdienst voor Gedeeld Beheer

ONDERTEKEND

The year in numbers · FY 2030–2031

71	member-cooperatives	4,207	farms recognised
412,338	hours of articulation work	€15,833,779	remunerated
11,348	Refusals issued	96.7%	sustained on review
8,201	Stewardship Statements	18,640	Provenance Records

A summary view of the Authority’s first full operational year in the Eastern Netherlands Region. Detailed tables in the Statistical Appendix (pp. 13–18).

2. Mandate

Excerpts from the founding statute, presented for public reference.

The Rijksdienst voor Gedeeld Beheer was established by the Wet op het Gedeeld Beheer in de Landbouw of 14 March 2029 (Staatsblad 2029, nr. 107). The relevant articles, in working translation, are reproduced below. The full statute is held at the Rijksarchief and is also available, in Dutch only, on the Authority’s public register at rgb.overheid.nl/wgbl.

Article 2 — Foundational duty of recognition

(1) The Authority shall recognise, count, and remunerate, on the terms set out by this Act, labour and knowledge produced in the agricultural sector which the prevailing compliance and disclosure regimes do not, by reason of their form, accept as evidence of work performed or as evidence of stewardship undertaken.

(2) For the avoidance of doubt, “form” in subsection (1) above includes machine-readable record formats, structured data schemas, sensor-platform intake protocols, and any administrative procedure which conditions the acceptance of a fact upon its rendering in such a record format or protocol.

(3) The Authority shall not be a regulator of the agricultural producer. The Authority shall be a recognising body of the agricultural producer and of those who work alongside the producer.

Article 14 — Refusals and the Stewardship Submission

(1) Where a member-cooperative determines, in its professional judgement, that an external scoring, audit, or inspection procedure has failed to admit testimony or evidence which would, on the cooperative’s professional view, render the procedure’s adverse finding incorrect, the cooperative may issue a written Refusal of the finding on behalf of the affected member.

(2) Refusals shall be recorded in the Register of Refusals maintained by the Authority and shall constitute a complete defence against premium adjustment, penalty, or compliance action by the issuing private body, subject to review by the Geschillencommissie Beheerderskeurmerk under Article 21.

(3) Member-cooperatives may, in the alternative or in addition, issue Stewardship Submissions in the format of their own choosing, which the Authority shall recognise as the cooperative’s complete and sufficient annual account of its stewardship under this Act.

Figure 2 · Refusal procedure (Article 14)

Article 17 — Remuneration of articulation work

- (1) Articulation work performed by farm advisors, member-farmers, and other persons in service of a member-cooperative shall be remunerated by the Authority at the rate set annually under Article 17(3). For the purposes of this Article, articulation work includes, without limitation, technical support to other members on platforms which the cooperative does not own, translation of testimony between record formats, mediation between members and external auditors, insurers, processors, or financial institutions, and the maintenance of informal knowledge-sharing arrangements outside any platform owned by an external party.
- (2) Remuneration under this Article shall not be conditioned on the use of any specific platform, vendor, or record format. The Authority shall not specify a tool by which articulation work must be performed in order to be recognised.
- (3) The rate for fiscal year 2030–2031 is set at €38.40 per recognised hour, reviewable annually.

Article 21 — Disputes Commission

- (1) The Geschillencommissie Beheerderskeurmerk shall hear appeals from private parties, public bodies, and members of the public regarding determinations made by member-cooperatives under Articles 14 and 17.
- (2) The Commission shall include, by statute, at least three members who are themselves working farmers or working farm advisors at the time of their appointment.
- (3) Decisions of the Commission are binding on the parties and shall be published in the Authority's public register within sixty days.

Note on extra-statutory effect

The 2029 Act is silent on its relationship to the European Union Common Agricultural Policy (GLB) framework. As a matter of administrative practice, the Authority has elected to count Stewardship Submissions logged under Article 14(3) as satisfying the Member State's obligation under the GLB conditionality regime, on the basis that the substantive content of those submissions exceeds the conditionality thresholds. The European Commission has, as of the date of this report, neither contested nor formally endorsed this practice. The matter is subject to ongoing administrative correspondence.

This Note is, in administrative terms, a polite restatement of the most important political fact of the Authority's existence. The European framework has not been changed. The Authority is acting under the assumption that its outputs are valid under that framework. The European Commission has not yet decided whether to agree. The reader should hold that uncertainty in mind throughout this report.

3. Executive Summary

Fiscal year 2030–2031, Eastern Netherlands Region. The numbers reported below are reconciled against the Statistical Appendix that follows (pp. 13–18).

Indicator	Subject	Value
Member-cooperatives	Stewardship Mark Programme	71
Member-farms	represented through the above	4,207
Articulation work hours	recognised under Article 17	412,338
Articulation work, paid	in euros at 2030–31 rate (€38.40/h)	€15,833,779
Refusals issued	under Article 14	11,348
sustained	on review by Disputes Commission	10,973
withdrawn	on review	211
pending	as of 31 March 2031	164
Stewardship Statements	on member-chosen terms	8,201
Provenance Records	peer-to-peer knowledge contributions	18,640
Counter-Submissions	to private scoring or auditing bodies	47
Articulation hours / advisor	median, full-time equivalent	18.3 / week
ratio to prior	vs. pre-2029 unbilled IT-support estimate	1.0 : 1
Disputes initiated	by private parties contesting RGB findings	1,214
in cooperative’s favour		1,018
against cooperative		162
settled		34

Distribution of articulation hours, 2030–2031

The Authority draws particular attention to the median articulation hours per advisor (18.3 hours per week, full-time equivalent). This is approximately equal to the median weekly unbilled IT-support hours reported in the 2026 pilot study of pre-Act advisor working time (Wageningen UR / LTO Nederland). The Authority does not interpret this equivalence as a sign that nothing has changed. The labour was always there. The change is in what is counted.

Before and after recognition

What the numbers do not say

The numbers above do not record three categories of activity that are central to the Authority’s mandate. First, the labour performed by member-farms in declining to enrol in private-platform schemes, including the interpersonal cost of doing so in communities where neighbours have enrolled. Second, the labour performed by elderly members in dictating Stewardship Statements at length, a kind of work this Authority does not yet know how to count without diminishing it. Third, the work performed by advisors in not performing articulation work, in declining a request, in referring the matter onward, in saying no. The Authority is conscious of these omissions and undertakes to report further on each of them in fiscal year 2031–2032.

End of summary. Detailed figures in Statistical Appendix, pp. 13–18.

4. Statistical Appendix

Tables B.1–B.6 inclusive. Source: Authority register, audited 30 April 2031.

Table B.1 — Articulation work by category

Category	Hours	% total	Paid (€)
Technical support to members on platforms not owned by the cooperative	168,204	40.8%	6,459,034
Translation between record formats (incl. verbal → structured)	81,490	19.8%	3,129,216
Mediation with insurers, processors, auditors, banks	64,122	15.6%	2,462,285
Maintenance of informal knowledge-sharing arrangements	49,771	12.1%	1,911,206
On-farm consultation (in person, full record)	41,087	10.0%	1,577,741
Other (incl. training, supervision of junior advisors)	7,664	1.9%	294,297
Total	412,338	100%	€15,833,779

The largest category (technical support, 40.8%) is the labour the Authority was, in substance, constituted to recognise. Of these hours, 91.2% pertain to platforms operated by parties other than the Authority, member-cooperatives, or member-farms.

Table B.2 — Refusals by counterparty type

Counterparty type	Refusals	Sustained	Withdrawn
Private welfare insurers	4,188	4,061	76
Dairy processors (private sustainability score-cards)	2,904	2,811	51
Private auditors acting under public contracts	1,877	1,821	23
RVO (in respect of GLB conditionality findings)	962	954	6
Rabobank / financial counterparties	827	810	12
Other private parties	590	516	43
Total	11,348	10,973	211

Figure 5 · Refusals by counterparty, 2030–31

Table B.3 — Refusal sub-categories (welfare monitoring interruptions)

Cause of interruption (as testified by herder)	Cases	Sustained %
Sensor battery failure	1,412	99.4%
Connectivity loss (rural mobile coverage gap)	941	98.8%
Sensor mechanical failure	368	97.6%
Sensor replacement in progress	229	99.1%
Power failure on holding	164	96.9%
Other / not specified	72	86.1%
Total in this sub-category	3,186	98.6%

Cross-reference: see Case File 2031-REF-0142 on p. 22. Prior to the Act, advisor working time spent fabricating plausible sensor values across battery-related interruptions was estimated by the 2026 pilot study at about 14.2 hours per advisor per week. The 2030–2031 figure for the same category, performed instead as Refusal preparation, is 11.7 hours. The Authority does not interpret this 17.6% reduction as productivity. The work has not become easier. It has become legible.

Table B.4 — Stewardship Submissions by chosen format

Format chosen	Submissions	% total
Free-text narrative co-recorded with advisor	3,412	41.6%
Structured form devised by the cooperative	2,108	25.7%
Photograph / facsimile with handwritten annotation	1,187	14.5%
Audio recording transcribed in cooperative office	841	10.3%
Combination of the above	653	7.9%
Total	8,201	100%

The Authority is not authorised, under Article 2(2), to require any particular format. Members elect, by a substantial majority, formats which the prior compliance regime would not have accepted as evidence.

Table B.5 — Pre-Act estimate vs. Act-recognised hours

Activity (hours per advisor / week)	2026 est.	2030–31	Change
All categories, total	19.4	20.5	+1.1
Technical support to members	9.8	9.2	−0.6
Translation between record formats	4.4	4.5	+0.1
Mediation with external parties	2.9	2.8	−0.1
Informal knowledge-sharing maintenance	1.6	2.2	+0.6
On-farm consultation, in person	0.7	1.8	+1.1

The most consequential change is on-farm consultation (+1.1 h/week). The Authority understands this as a direct consequence of recognising on-farm consultation as remunerated time under Article 17. Prior to the Act, an advisor visiting a farm in person performed work that did not appear in the cooperative’s reporting. Now it does. The labour did not appear. It now reappears.

Table B.6 — Geographic distribution of member-farms

Sub-region	Farms	Median size (ha)
Achterhoek (Gelderland, eastern)	1,042	27
Salland (Overijssel, central)	894	31
Twente (Overijssel, eastern)	716	22
Veluwe (Gelderland, central-western)	648	18
Liemers (Gelderland, southern)	478	34
Vechtdal (Overijssel, northern)	429	29
Total / median	4,207	26

Figure 6 · Member-farms by sub-region — Oost-Nederland

The Authority’s mandate applies nationally. Operations in the Western, Northern, and Southern Regions are reported separately. Member-farms here are predominantly small-to-mid-sized. The median holding (26 ha) falls below the EU-wide dairy median and well below the arable median.

5. Dossiers · Case Files

Six anonymised archive entries from fiscal year 2030–2031, presented in chronological order on a single working day in May 2031, in the office of Cooperative E-NL-007. A note on anonymisation. All personal names appearing below are common Dutch given names assigned for publication. No case file refers to an identifiable individual.

5.1 Articulation Work — Login support · Case 2031-AWL-1147

FILE	2031-AWL-1147	YEAR	2030–2031
REGION	Eastern NL, Coop. E-NL-007	CLASSIFICATION	Articulation Work
Reference: Statistical Appendix, Table B.1 (p. 13)		● rgb archive	

Antecedent (prior situation)

Before the Wet op het Gedeeld Beheer in de Landbouw (2029), labour spent by farm advisors on credential support for members on platforms not owned by the cooperative was unbilled. This included password failures on welfare-monitoring portals operated by private vendors. The 2026 pilot study (Wageningen UR / LTO Nederland) estimated 9.8 hours per advisor per working week, sector-wide median (Table B.5, p. 16).

Cooperative action

On 13 May 2031, at 09:14, a member of Cooperative E-NL-007 called the cooperative office. He herds 45 head of dairy in the Achterhoek sub-region. He could not access the morning’s welfare-monitoring data on the platform run by his vendor (KoeKompas B.V.). The junior advisor on duty, S.K., took the call. The credential failure could not be fixed on the first attempt. The password-recovery email had been sent to an address the member had not used in years. The advisor walked him through the recovery on that account by telephone, and the platform credential was reset. Time at the cooperative office: 22 minutes. Time on the member’s holding (interpolated from telephone records): 28 minutes. The morning’s herding routine was disrupted by about the same interval.

Designation

Designation	Articulation Work — Technical Support to Members (Cat. 1)
Issued by	Cooperative E-NL-007
On behalf of	Member [J.W.], herder, 45 head, Achterhoek
Advisor of record	[S.K.], junior advisor, six months in post
Hours logged	0.4 h (advisor); 0.5 h (member, interpolated)
Remunerated	€15.36 (advisor, Art. 17 rate)
Pertains to totals	Cat. 1: +0.4 of 168,204 (Table B.1)
Status	Closed

Star, S. L., & Strauss, A. (1999). Layers of Silence, Arenas of Voice. CSCW 8(1–2), 9–30. The Authority’s recognition of credential-support labour as work performed in service of the cooperative is the canonical case of what Star and Strauss describe. Articulation work has been rendered into a category that admits remuneration.

5.2 Stewardship Statement — Hendrika de V. · Case 2031-SST-0214

FILE	2031-SST-0214	YEAR	2030–2031
REGION	Eastern NL, sub-region Salland	CLASSIFICATION	Stewardship Statement
Reference: Statistical Appendix, Table B.4 (p. 15)			● rgb archive

Antecedent (prior situation)

On the same morning (13 May 2031), Cooperative E-NL-007 received an email from RVO requesting a machine-readable manifest of herd composition, calving dates, antibiotic events, and grazing-rotation patterns. The request concerned an elderly member, H. de V., 73 years old, 31-head dairy operation in Salland. The member is not connected to the cooperative’s dashboard. She has never been connected to any external platform. She corresponds with the cooperative by hand-written letter and occasionally by SMS. The 2026 pilot study identified RVO spot-audit responses for such members as the leading category of fabricated record-creation, an estimated 2.1 hours per advisor per week.

Cooperative action

Acting under Article 14(3) of the Act, the cooperative arranged for the member to dictate a Stewardship Statement in the cooperative office on the afternoon of 14 May 2031. The dictation lasted ninety-two minutes. The senior advisor on duty (name redacted) co-recorded the statement and confirmed its substantive accuracy at the close. The statement was then submitted to RVO under the procedure prescribed by the Authority. RVO acknowledged receipt on 16 May 2031.

FACSIMILE · de-identified

“...En in maart 2018 was er een kalf die niet bij het biest wilde. Zwart pootje, ik weet niet meer welke naam, ik denk Trijntje, maar het was niet onze Trijntje, het was haar dochter denk ik. Mijn man was er nog. We hebben de hele nacht met haar gewerkt. Ik leerde toen dat je niet alleen maar moet voeren. Je moet ook letten op de manier waarop ze ademt voor je het probeert...”

“...And in March 2018 there was a calf who would not take colostrum. Black foot, I don’t remember the name any more, I think Trijntje, but it was not our Trijntje, it was her daughter I think. My husband was still alive. We worked with her the whole night. I learned then that you must not only feed. You also have to watch the way she breathes before you try...”

— excerpt from dictated Stewardship Statement, transcribed verbatim, 14 May 2031.

Bowker, G. C., & Star, S. L. (1999). *Sorting Things Out: Classification and Its Consequences*. MIT Press. The acceptance of a 92-minute spoken account in place of a machine-readable manifest is a deliberate refusal of the residual category. The prior regime assigned that category to all evidence not expressible in the spot-audit schema.

5.3 Refusal #142 — sensor interruption · Case 2031-REF-0142

FILE	2031-REF-0142	YEAR	2030–2031
REGION	Eastern NL, sub-region Voorst	CLASSIFICATION	Refusal
Reference: Statistical Appendix, Table B.3 (p. 15)			● rgb archive

Antecedent (prior situation)

Before the Wet op het Gedeeld Beheer in de Landbouw, a four-hour gap in the welfare-monitoring data of a dairy operation triggered an automatic risk-model adjustment by the private animal-welfare insurer. For the operation in question (84 head, Voorst region), the adjustment would have amounted to about €340 per year in higher premium. The standard remedial action was the manual entry of plausible sensor values across the gap. Farm advisors did this at about nine instances per advisor per week between 2026 and 2028. The insurer’s intake portal accepted these values without further inquiry. Pfaffenberger (1992) would describe this as a textbook adjustment performed to keep regularisation viable.

The interruption was a sensor battery failure, per the herder’s own record. The animals were, in his plain language, rustig, geen issues (calm, no issues). He sent his report in Dutch by text message on the evening of the interruption, with an offer to replace the battery the next morning.

Cooperative action

Cooperative E-NL-007 declined to perform the customary adjustment. Acting under Article 14(2), the cooperative issued a written Refusal to the welfare insurer on the herder’s behalf. The Refusal stated that the four-hour gap reflected a discharged sensor battery, not a welfare event, and that the herder’s contemporaneous record was sufficient testimony for the period. The cooperative further notified the insurer that the premium was not to be adjusted on the basis of the gap, and that any attempt to do so would be referred to the Geschillencommissie Beheerderskeurmerk under Article 21.

The insurer acknowledged receipt on 13 May 2031. The premium was not adjusted.

FACSIMILE · de-identified

“Batterij in de barn-sensor leeg, vervang morgen. Koeien rustig, geen issues. — P.”

[WhatsApp message, 22:46, 8 May 2031, de-identified.]

Annotated in advisor’s hand at 22:47: “Bij dit logboek. Niet aanvullen.” (“Filed with this log. Do not fill in.”)

Designation

Designation	Refusal #142 (welfare-monitoring)
Issued by	Cooperative E-NL-007, Article 14(2)
On behalf of	Member [P.B.], herder, 84 head, Voorst
Advisor of record	[S.K.], junior advisor; senior advisor concurring
Hours logged	0.3 h (S.K.); 1.6 h (senior advisor); 0.4 h (insurer correspondence)
Status	Closed without adjustment
Pertains to totals	Refusals: +1 of 11,348; Welfare-monitoring sub-category: +1 of 3,186

Pfaffenberger, B. (1992). Technological Dramas. *Science, Technology, & Human Values*, 17(3), 282–312. The pre-Act practice of manually filling in absent sensor data fits Pfaffenberger’s description of adjustment. An unofficial labour, performed at low organisational visibility, which lets a regularising frame keep operating as if its premises held.

5.4 Provenance Record #2,318 — leaf spots · Case 2031-PRV-2318

FILE	2031-PRV-2318	YEAR	2030–2031
REGION	Eastern NL, sub-region Salland	CLASSIFICATION	Provenance Record
Reference: Statistical Appendix, Table B.1 (Cat. 4) (p. 13)			● rgb archive

Antecedent (prior situation)

The cooperative’s Advisory Intake Form (deployed in compliance with GLB Annex 7, Knowledge Transfer Traceability) required a Farm ID, a Symptom Severity score (1–5), an estimate of Affected Hectares, a photo upload (≤2 MB), and a Symptom Category from a dropdown of 47 named conditions. Member enquiries in other formats could not, prior to the Act, be registered as advisory work. In practice, most enquiries arrived by SMS, WhatsApp, phone, or in person.

Cooperative action

At 10:55 on 13 May 2031, a member of Cooperative E-NL-007 sent a WhatsApp message to the advisor on duty. The member owns a 6-hectare organic vegetable operation in Salland. The message asked “Mijn aardappelen hebben deze vlekken op de bladeren. Geen idee wat het is. Heb jij een idee?” (“My potatoes have these spots on the leaves. No idea what it is. Do you have an idea?”). A 4.1 MB photograph was attached.

The advisor (S.K.) could not register the enquiry under the Intake Form. She posted the photograph and the question into the unofficial inter-cooperative network operating on WhatsApp under the name E-NL Bouwlanders (47 members). A reply arrived four minutes later from a peer advisor in Twente. He identified the foliage as likely *Phytophthora infestans* and recommended an immediate underside inspection. A second confirmatory reply arrived twelve minutes later from an elderly member in Salland who had observed a similar pattern in 2018.

Under Article 17 and Article 14(3), the cooperative registered the exchange as a Provenance Record. The Record names, by initial, the member who raised the enquiry, the peer advisor who identified the disease, and the member who confirmed the historical pattern. All three accrue standing under the Authority’s Article 17 framework.

Designation

Designation	Provenance Record #2,318 — peer-knowledge contribution
Issued by	Cooperative E-NL-007, Article 14(3)
Parties named (by initial)	[M.t.H.], enquirer; [J.M.], identifying advisor; [H. de V.], historical pattern
Advisor of record	[S.K.] (registering)
Elapsed time, enquiry to identification	4 minutes
Articulation hours logged	0.3 h (advisor S.K.); 0.2 h (peer advisor J.M.)
Pertains to totals	Provenance Records: +1 of 18,640; Cat. 4: +0.5 of 49,771
Status	Closed

The Authority notes that the WhatsApp network E-NL Bouwlanders, operating outside any platform owned by an external party, accounted this year for 18,640 Provenance Records, about 2.3 per active advisor per working week. Prior to the Act, this network was administratively invisible. The Authority does not maintain it and would not. Its value rests in part on its operation outside the Authority’s reach.

5.5 Counter-Submission — processor scorecard · Case 2031-CSB-0006

FILE	2031-CSB-0006	YEAR	2030–2031
REGION	Eastern NL, Coop. E-NL-007	CLASSIFICATION	Counter-Submission
Reference: Statistical Appendix, Table B.2 (p. 14)			● rgb archive

Antecedent (prior situation)

A leading private dairy processor (“the Processor”) holds long-standing supply contracts with many of the cooperative’s dairy member-farms. The Processor runs a monthly sustainability-scoring procedure called Foqus Planet. Its scoring criteria are: sensor uptime, automated milk-yield reporting, methane-intensity reporting via a designated programme, pasture-day reporting on the Processor’s platform, and third-party soil-organic-carbon measurement. Not counted by the score: multi-species sward maintenance, refusal of antibiotic prophylaxis, manual rotation by advisor or herder observation, neighbour cooperation, and refusal of early-weaning. Farms scoring below 80 points lose the Processor’s premium for the next quarter. The 2030 aggregate cost for this region was about €82,000.

Figure 8 · What the Foqus Planet scorecard counts — and does not

The Processor’s scoring procedure is, in the Authority’s view, a case of technological momentum (Winner, 1980). The prior choice of digitally legible inputs becomes the condition of market access.

Cooperative action

At the cooperative’s monthly governance meeting of 7 April 2031, the membership voted 38–6–4 to issue a Counter-Submission under Article 14(3) of the 2029 Act. Drafted by the stewardship committee and signed by the 38 member-farms which voted in favour, the document constitutes the cooperative’s complete and sufficient annual account of its stewardship and explicitly declines to be scored by the Foqus Planet criteria. It was transmitted to the Processor on 12 April 2031 with a covering letter notifying the Processor that the cooperative would supply under the terms of its existing contract or not at all.

The Processor, after 26 days of correspondence, accepted the supply on the cooperative’s terms for the third quarter of 2031. The Authority understands that further correspondence is ongoing and that the cooperative does not consider the matter resolved.

Designation

Designation	Counter-Submission — to private sustainability scoring
Issued by	Cooperative E-NL-007, Article 14(3), by member vote 38–6–4
Counterparty	FrieslandCampina, Foqus Planet programme
Signed by	38 dairy member-farms of E-NL-007
Disposition	Supply accepted by Processor for Q3 2031 on cooperative terms
Premium structure	no adjustment applied; correspondence continuing
Articulation hours logged	188 h (drafting committee + advisor time)
Pertains to totals	Counter-Submissions: +1 of 47
Status	Closed for Q3 2031; member vote on Q4 2031 scheduled June 2031

Winner, L. (1980). Do Artifacts Have Politics? *Daedalus*, 109(1), 121–136. Also Morozov, E. (2013). To Save Everything, Click Here. The Authority concurs with Morozov. The critique is not of the Processor’s good faith. It is of the structure that licenses good-faith private actors to operate quasi-regulatory scoring procedures over public agricultural policy goals.

5.6 Articulation Work Ledger — S.K. · Case 2031-AWL-1124

FILE	2031-AWL-1124	YEAR	2030–2031
REGION	Eastern NL, Coop. E-NL-007	CLASSIFICATION	Articulation Ledger
Reference: Statistical Appendix, Table B.5 (p. 16)			● rgb archive

Antecedent (prior situation)

The Authority’s mandate under Article 17 requires the recognition of articulation work as remunerated labour. The Authority cannot perform that recognition unilaterally. The cooperative is required to register the hours and the categories. To assist member-cooperatives in this duty, the Authority publishes, with the consent of the affected advisor, an annual Articulation Work Ledger for a single working week, selected at random. The present file is the Ledger for fiscal year 2030–2031, drawn from the week of 12–18 May 2031.

At the conclusion of that week, the advisor S.K. posed, in conversation with the senior advisor on duty, a question which the Authority preserves verbatim for the record: “Hoe tellen we eigenlijk wat we doen?” (“How do we count what we actually do?”). The Ledger that follows is, in part, an answer to that question.

Cooperative action

The full Ledger comprises 287 individual entries across the working week. The summary below aggregates the entries by category.

Category	Hours	Entries
Technical support to members on external platforms	9.1	142
Translation between record formats	3.8	47
Mediation with insurers, processors, auditors, banks	2.4	18
Maintenance of informal knowledge-sharing arrangements	2.1	41
On-farm consultation (in person, full record)	1.6	6
Supervision by senior advisor; training	0.4	3
Total recognised this week	19.4	257
Non-articulation duties (Cat. 6 reserved)	12.0	30
Standard working hours, gross	31.4	287

Prior-regime reporting for the same advisor in the same week logged 13 advisory contacts and 6.5 hours billed to advisory services. The remaining hours, the substantial majority of the week's labour, were not reported.

Designation

Designation	Articulation Work Ledger — annual sample, FY 2030–2031
Issued by	Cooperative E-NL-007, Article 17
On behalf of	Advisor [S.K.], six months in post at week of sample
Period sampled	12–18 May 2031
Total articulation hours, week	19.4
Remunerated	€744.96 (advisor, Art. 17 rate, week of sample)
Pertains to totals	Statistical Appendix B.5 (p. 16)
Status	Published

The Authority closes this dossier with a note on its own limits. The Ledger counts hours that can be counted. It does not count the moments in which the advisor S.K., during the week, recognised something happening on a member-farm that the member-farm did not wish to articulate. That work is performed. That work is not reported. That work is not paid. The Authority does not know what to do with this. It records the limitation here, in the public account, in the hope that a future Director may know better.

6. Brieven uit Lidcoöperaties · Letters from Member Cooperatives

Three short letters received by the Authority during fiscal year 2030–2031, selected for publication with the consent of their authors. Names and place names have been replaced with initials in accordance with §6 anonymity provisions.

Letter from the Chair, Cooperative E-NL-007

Cooperative E-NL-007 · Salland

14 April 2031 ·

Chair, office filing

Aan: J.E. van Dalen, Directeur RGB

Geachte Directeur,

I write to confirm, for the Authority's register, that on 12 April 2031 our cooperative transmitted the Counter-Submission described in Case File 2031-CSB-0006 (p. 26) to the Processor with whom 38 of our member-farms hold supply contracts. I write also, on the cooperative's behalf, to make a note for the public record which the case file does not, in our judgement, make sufficiently clear.

The vote was 38 in favour, 6 against, 4 abstaining. The six members who voted against are not opponents of the Authority and are not opponents of the Act. They are, in three cases, members whose holdings cannot absorb a temporary loss of premium and who, before the Counter-Submission was issued, asked the cooperative for an assurance the cooperative could not give. We did not have an assurance to offer. The Processor accepted our terms for the third quarter. The Processor may not accept our terms for the fourth quarter. The cooperative is, as I write this, twenty-six days from a second member vote on whether to issue a Counter-Submission for Q4. I do not know how that vote will go. I do not know how I will vote.

I am told by the senior advisor on duty that the Authority, in such cases, prefers a frank record over a triumphal one. This letter is offered in that spirit.

Met vriendelijke groet,

R.B. Nijhuis

Chair, Cooperative E-NL-007

Letter from a member, Salland

H. de V., 31 head · Salland
signed at the cooperative office

17 mei 2031

Aan: de Directeur

Beste meneer or mevrouw,

The young advisor at our cooperative says I should write you a letter for the report. I asked her what to put in it. She said anything I wanted. So I will tell you that I dictated a paper this week about the cows. I have not written so much down at once in many years. I told the advisor about Trijntje's daughter and the night we sat with her and what I learned. I told her about the time the inspector came in 2007 and what I had to put on his form, which was nothing of what I knew about my cows. The advisor wrote it all down. Then I signed it.

The advisor said this counts now. I do not understand fully why it counts now and did not count before. I understand that someone in The Hague decided that it counts now. That is fine. I will say that I felt, sitting in that office while the young advisor wrote, that I had been waiting for a long time. I am seventy-three years old. I do not know how long the new arrangement will last. I have seen the inspector come and go many times. I hope this arrangement lasts.

I have nothing else to add.

Hoogachtend,
H. de V.
Salland

Letter from an advisor

S. K., junior advisor · Cooperative E-NL-007

20 mei 2031

submitted by email to the Director's office

To the Director, with respect

I am six months into this post. The senior advisor who supervises me has asked me to write something for this year's report. The case file in §5.6 publishes a week of my work, and they tell me it is normal practice to allow the named advisor a short response. I have read what is written about me. The case file is accurate. I want to add two things.

The first is about the question quoted in the case file. How do we count what we actually do? I want to say, for the public record, that I did not ask it as a deep question. I had spent four hours that morning helping a member log in to a sensor he never wanted to begin with. I was tired. I was eating a cheese sandwich. The question fell out of me. The Authority has taken the question more seriously than I did when I asked it. I am grateful for that. I will also say that I am, at twenty-six, suspicious of arrangements that depend on someone taking my offhand questions more seriously than I take them. I do not know what to make of that suspicion. I am writing it down here because the senior advisor told me a serious institution writes its doubts on its own paper.

The second is that the case file does not record one event from that week which I think is the most important event of the week. On the Friday afternoon, a member I had visited the previous week called the office. He did not have a question. He wanted to tell me that his neighbour, whom I have never met, had asked him that morning about his herd. They have not spoken since 2019, after a fence dispute. They have begun speaking. The member called the office because he wanted someone to know. I do not know what category to put this in. I do not think any category in the Ledger is correct. I do not think the work I did on the visit the previous week is what caused it. I do not think I am owed any credit for it. I am writing it down here because the member asked me to tell someone, and the senior advisor told me that the Authority is, on Tuesdays, someone.

In dienst,

S. K.

Junior advisor, Cooperative E-NL-007

7. Risks to the Programme

The Authority is required, under Article 24 of the 2029 Act, to set out in each annual report the three principal structural risks to the discharge of its mandate. The risks reported below were adopted unanimously at the Director’s meeting of 28 April 2031.

Risk 1 — Recapture

The risk we are most concerned about is that this Authority itself becomes the form against which the next generation of optimisations is performed. The 2029 Act constituted the Stewardship Mark Programme as an instrument of recognition, not ranking. The Authority does not publish league tables of member-cooperatives. It does not condition any benefit on relative stewardship performance. Its posture is to count work that has been done, not to compare work across members.

We do not know whether this posture will hold. Comparable instruments in the recent past, such as the EU Common Agricultural Policy conditionality regime, began as instruments of recognition. By stages, they were converted into instruments of ranking, of benchmarking, of relative compliance scoring, and finally of access conditionality. Each conversion was presented as a reasonable refinement. Taken together, they produced the regime that the 2029 Act was constituted to replace.

The Authority’s working position is that the procedural defence against recapture is statutory, not administrative. It rests on Article 2(3) (“The Authority shall not be a regulator of the agricultural producer”) read together with Article 17(2) (“Remuneration...shall

not be conditioned on the use of any specific platform, vendor, or record format”). That defence is, by itself, insufficient. A statutory commitment is words on paper. The Authority commends to the political branches the question of how the present settlement is to be sustained beyond a single legislative cycle.

Risk 2 — Exclusion at the margin

The Act recognises labour inside member-cooperatives. Farms whose proprietors are not in a member-cooperative do not directly benefit. In this region, that is an estimated 1,840 holdings as of 31 March 2031.

The population of non-member farms is not random. Migrant smallholders, of which an estimated 290 are presently operating in this region, are substantially under-represented in cooperative membership. Farms operated by proprietors in cognitive decline, of which an estimated 110 are presently operating in this region, are also under-represented. Farms whose proprietors are in dispute with cooperative leadership are not centrally tracked and are also not represented.

The Programme as presently structured may, by an unintended path, narrow the population of farms whose stewardship is recognised, even as the work it recognises within that population is more substantively legitimate. The Authority does not have a fully satisfactory remedy to propose. The absence of a remedy is not the same as the absence of a problem.

Risk 3 — Internal contestation

Member-cooperatives disagree about what constitutes articulation work. The most consequential disagreement this year concerned the off-platform WhatsApp network among advisors described in Case File 2031-PRV-2318 (p. 24). Should it count as Category 4 under Table B.1, or is it a private matter outside the Authority’s recognition? The Disputes Commission affirmed the former interpretation on a 5–4 vote in March 2031. The minority opinion, held by a member-farmer of unimpeachable standing in this region, argued that recognising informal knowledge networks as articulation work would formalise them. The value of such networks rests in part on their informality.

The Authority has no judgement to offer on whether the minority opinion is correct. It records the disagreement here, in the public account, on the basis that a regime that does not show its internal contestation is concealing something.

Reconstitution is not exit. It is a different room with different forms.
The Authority does not claim otherwise.

Closing remarks of the Director

The three risks above are not independent. They share a common form. In each, an instrument designed to recognise something outside the regularising frame becomes, by the ordinary work of making the instrument workable, an instrument inside the frame. The labour the platform did not see. The farm the cooperative did not enrol. The network whose value rested on its informality. Recognition itself is what does it. We count what we recognise. Counting is a frame. The frame is the next instrument.

The Authority records these risks not in the expectation that the present Director or the present membership can foreclose them. It records them so that a future Director, reading this report against a Stewardship Mark Programme that has narrowed in the manner described, will not be able to claim the trajectory was unforeseen.

This concludes the risks section. The reader is referred to the case files (pp. 18–31) for the routine year against which the risks should be read, and to the Sources & Colophon section that follows.
