

This booklet is a fake.

I am a master's student in Computer Science (AI) at Leiden University. I made this for the course *AI & Society* in spring 2026. The institution in the booklet does not exist. There is no Act. The annual report does not exist. I wrote and typeset every page.

What does exist is one interview. On 16 April 2026, in a café in Deventer, a senior farm advisor at a regional cooperative gave me about an hour. We were supposed to talk about precision-agriculture tooling. We ended up talking about forms. One sentence from that day stayed with me.

“Mijn boeren zijn niet bang voor apps. Ze zijn bang voor de formulieren waar de apps aan vastzitten.”

“My farmers are not afraid of apps. They are afraid of the forms the app is connected to.”

The whole booklet is a response to that sentence. I invented a Dutch authority that would have to exist for the sentence to be answered.

I am not Dutch. I am Iranian, doing a master's at Leiden. A Dutch friend from my programme checked the Dutch in this booklet. He does not know agricultural vocabulary, so some technical terms may be a bit off. If you spot something, please tell me. I would rather know.

The booklet looks polished because I think it has to. A fake state document only works if it looks like one. I spent two weeks on typography I had no business doing. I set the tables in LaTeX. I lost a full day to a booklet imposition

that kept rotating every page ninety degrees. I used AI tools the way I might use a graphics editor. Layout drafts, language polish, LaTeX debugging. The coat of arms is a vector generated by Recraft V4.1 (an image-generation API) from a written brief I wrote about what the symbols should mean. I drew an earlier version in TikZ; it looked Belgian on the first try and never quite recovered. The decisions about what to make impossible and what to put in the Risks section are mine.

If I had two more weeks I would do three things differently. I would include a farmer letter. Right now I have two cooperative voices and one advisor. No farmer survived the cutting room. I would also re-interview the advisor and ask him to read the booklet, because I built a whole institution around one of his sentences. And I would write the Risk 2 section much longer. It names 1,840 farms my Authority excludes but does nothing about them.

This is a speculation, not a proposal. I am not pitching for the Authority. I am trying to make visible what the advisor named, the form behind the app, and to imagine what kind of public body would have to exist to take that form seriously. The body I imagined has problems of its own. They are in section 7.
