ARTICULATION WORK

Login support: a farmer cannot access his sensor platform on a Tuesday morning.

WHO Member [J.W.], 45-head dairy operation

WHERE Achterhoek sub-region

LOGGED 0.4 h advisor + 0.5 h member (interp.)

OUTCOME Closed. €15.36 paid to advisor at Art. 17 rate

At 09:14, Jan calls. He cannot log into the welfare-monitoring platform his vendor (KoeKompas B.V.) provided. The credential reset email goes to an address he last used several years ago. The advisor walks him through the recovery by phone. Twenty-two minutes of office time. Twenty-eight minutes of his herding routine disrupted. The labour of keeping a platform he never asked for working. Recognised, this time, as work.

2031-SST-0214

STEWARDSHIP STATEMENT

Hendrika dictates her own audit response, on her own terms, for ninety-two minutes.

WHO Member [H. de V.], 73, 31-head dairy

WHERE Salland sub-region

LOGGED 2.2 h advisor + 1.6 h member recognised

OUTCOME Accepted by RVO. No follow-up

RVO has emailed a spot-audit request for herd composition, calving dates, antibiotic events. Hendrika is not on any platform. Under the prior regime, the advisor would have fabricated a machine-readable manifest. Under the Act, she comes to the office and dictates a Stewardship Statement at length. She talks about a calf in March 2018 who would not take colostrum. The advisor writes it all down. She signs. The audit closes.

REFUSAL #142

A sensor battery dies. The cooperative refuses to fabricate the missing data.

WHO Member [P.B.], 84-head dairy operation

WHERE Voorst sub-region

LOGGED 0.3 h advisor + 1.6 h senior + 0.4 h insurer corr.

OUTCOME Premium adjustment refused. Closed

A four-hour gap in the welfare-monitoring stream, 22:14–02:08. The insurer's risk model auto-flags it. Under the prior regime, advisors fabricated plausible sensor values across such gaps at the rate of about nine per week, to save members the €340/year premium increase. The cooperative has a herder's contemporaneous text saying *Batterij in de barn-sensor leeg, koeien rustig, geen issues*. It issues a written Refusal instead. The insurer acknowledges. The premium is not adjusted.

2031-PRV-2318

PROVENANCE RECORD

A WhatsApp question about potato leaf spots is logged as peer knowledge.

WHO Member [M.t.H.], 6-ha organic vegetable farm

WHERE Salland sub-region

LOGGED 0.3 h advisor + 0.2 h peer advisor

OUTCOME Closed. Three parties accrue standing

The official Advisory Intake Form requires a Farm ID, a Symptom Severity score, an Affected Hectares estimate, a Symptom Category from a closed dropdown. Marieke's WhatsApp message (*Mijn aardappelen hebben deze vlekken op de bladeren*) cannot be registered through it. The advisor posts the photo into the unofficial peer network *E-NL Bouwlanders* instead. A reply arrives in four minutes from an advisor in Twente: *Phytophthora, check the underside*. Under the Act, the exchange is logged as a Provenance Record naming all three parties.

2031-CSB-0006

COUNTER-SUBMISSION

Thirty-eight farmers vote to refuse FrieslandCampina's sustainability scorecard.

WHO Cooperative E-NL-007, dairy stream (38 farms)

WHERE Eastern Netherlands

LOGGED 188 h drafting committee + advisor time

OUTCOME Processor accepted Q3 2031 supply on cooperative terms

The Foqus Planet scorecard counts sensor uptime, automated milk-yield, methane, certified soil carbon. It does *not* count multi-species swards, refused antibiotic prophylaxis, manual rotation by observation, neighbour cooperation. The cooperative's farms score 76, four points below the bonus threshold (€82,000 at stake). The membership votes 38–6–4 to refuse the score and issue a Counter-Submission instead. The Processor, after 26 days of correspondence, accepts the supply on the cooperative's terms.

ARTICULATION WORK LEDGER

Junior advisor S.K.'s week, fully logged: 287 entries, 19.4 hours of articulation work.

WHO Advisor [S.K.], 6 months in post

WHERE Cooperative E-NL-007

LOGGED 19.4 h recognised + 12.0 h non-articulation

OUTCOME Published. €744.96 paid for sample week

The Ledger publishes one week of one advisor's time, with consent. 9.1 hours on technical support to members. 3.8 on translation between record formats. 2.4 on mediation. 2.1 on knowledge-sharing maintenance. 1.6 on on-farm consultation. 0.4 on supervision. Under the prior regime, the cooperative would have reported 13 advisory contacts (6.5 hours) for the same week. The other 12.9 hours of articulation work were performed. They were not reported. *How do we count what we actually do?* That is S.K.'s question, which prompted this case file.
